

Maianthemum stellatum

False Solomon Seal

Plant type:

Season of Interest:

Height: 1-2'

Water needs:

Native Region:

Elevation:

Important to know:

Perennial

Late Spring to Fall

Spread: 10"-2'

Average

CO, AZ, KS, NE, NM, OK, UT, WY

up to 12,500'

In natural settings, regenerates primarily rhizomatously

Maintenance:

Characteristics:

Garden uses:

Habitat:

Low

Showy

Banks & Slopes, Ground Cover,
Underplanting Roses & Shrubs

Forests, shady places, along streams

Ease of Propagation: Easy

Propagation: Remove the tan seeds from the red fruit. Sow them as soon as possible. Keep them moist until beginning required temperature cycles. The seeds require two years with 4 temperature cycles of 40-70-40-70. (Possibly one long cold period of 100+ days would suffice.) They form a radicle the first spring. Leaves emerge the second spring. The easiest way to germinate the seeds is outdoors in situ.
