

Senecio spartioides

Broom-like Ragwort

Plant type:	Perennial
Season of Interest:	Summer to Fall
Height: 8"-2.5'	Spread: 1-3'
Water needs:	Very Low
Native Region:	CO, AZ, NM, TX, UT, WY
Elevation:	to 9,500'
Important to know:	This is an important larval and adult food host for many of our native invertebrates. May act like an annual so reseed!

Maintenance:	Low
Characteristics:	Showy
Habitat:	Dry, open places, meadows

Ease of Propagation: Easy

Propagation: If several seed grown plants are fairly close to each other, seeds may be fertile. Sow in situ or in cells with very light cover in early spring, late April to mid-May in the Front Range. Germinate in 2 weeks.
